

Minor in Information Science for Linguistics Majors

What is information science?

Information science is dedicated to connecting information, data, and human behavior. This interdisciplinary work supports better decision-making, discoveries, and overall productivity.

How can I expand my career opportunities?

Combine your studies in linguistics with information science empowers you to:

- Use AI to translate languages and utilize machine translation
- Develop chatbots and other conversation simulation and sentiment programs
- Create knowledge from unstructured and structured text sources
- Explore natural language interfaces

Boost your career potential to take on roles in areas like software development, customer service, scientific research, AI tools, and much more.

How many credits is the minor?

15 credits (or five courses) is all it takes to add technical expertise to your professional capabilities!

Do I need to have computer programming experience?

No! All students take one introductory programming course, which can be waived based on previous college-level programming course(s).

The four other classes are electives that can be chosen to fit your studies and professional goals.

What types of classes will I take?

Classes include Human-Centered Systems, Data Analysis, Cloud Computing, IT Project Management, Information Visualization, Social Computing, and Security and Privacy.
